</tbody>
</table>

Za blistavca ni registriranih drstišč, ker ni lovna vrsta. Zato so drstišča enaka kot pri platnici.

Potencialna drstišča blistavca so še na drstiščih reofilnih ciprinidnih vrst (klen, klenič in mrena).

Platnica se drsti od aprila do maja.

Sulec se drsti od marca do aprila.
